

Regular lines: POLAND – NORWAY including the complex customs service within ENTERPRISE LOGISTICS groupage system

Enterprise Logistics groupage system between Poland and Norway is based on six solid groupage connections leaving the main hub in Stargard Szczeciński, Poland to Norway and back.

Distribution of 90% of the groupage shipments in the area of Norway is carried out directly by our drivers. It limits the number of reloadings of the cargo to only one operation that is done in the central hub in Stargard Szczeciński.

Enterprise Group's own branch company – ViaBaltic Norge AS situated in Drammen, Norway – is a key component of our groupage system. ViaBaltic Norge AS is responsible for distribution of the shipments to the northern areas of the country. It enables us to offer our customers a range of deliveries covering the entire area of Norway.

Taking into consideration the complex customs service which is assured by our customs agency ViaBaltic owning branches in Świnoujście, Gdańsk and in Drammen, Norway, we can confidently determine our offer as the best on the market.

The system works similarly in the case of the consignments from Norway, i.e. collections from the area of the whole country are carried out from Monday to Friday, and delivered to Poland on Monday – Tuesday.

The new, second groupage line on this relation serves shipping of the consignments that are collected from Poland on Monday and Tuesday, from codes PL 4-9. The deliveries in Norway are carried out until Thursday and Friday in the same week. It is working exactly the same in the opposite direction; collection from Norway and the delivery to the said codes in Poland are realised in the single week.

In view of the dynamically rising volume of the groupage shipments in export and import, the launching of the new weekly line connection is to meet our clients' expectations and it has made our offer even more attractive.

The majority of global and Scandinavian logistic operators offers the groupage connection to and from Oslo in relation with Poland only once a week. In comparison, our service is one of the most efficient on the market. It assures transit time of 3 to 4 working days.

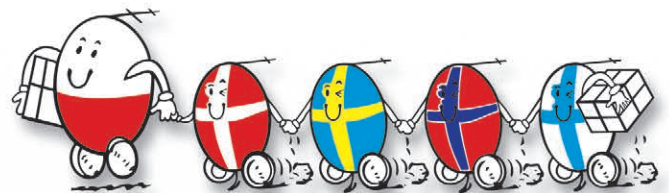

PL → Oslo + Drammen (+100 km) → PL

Our newest achievement is the launching of another groupage line operating every week to Oslo and Drammen area. It strongly distinguishes our offer from others on the trans-Baltic LTL market.

The first line leaves Poland during weekends and it carries the consignments that are collected from the area of Poland from Monday to Friday. Deliveries in the area of Oslo and Drammen are carried out on Monday and Tuesday.

PL → western and northern Norway → PL

The groupage system by Enterprise Logistics offers the direct deliveries performed by our drivers not only to Oslo area but also to western and northern areas of Norway. The trucks of 4 groupage lines to Stavanger, Bergen, Alesund + Molde and Trondheim are leaving Poland every weekend.

The consignments collected in Poland from Monday to Friday are handled within these lines. Deliveries to the consignees are taking place on Tuesday and Wednesday the following week. Collections from Norway are taking place from Monday to Thursday and the deliveries in Poland are carried out on Monday and Tuesday the following week.

In addition, besides the standard shipments that are carried out within the groupage lines described above, we also handle the express orders, the ones demanding quicker delivery.

As part of our groupage system we are able to handle dangerous goods ADR shipments as well as temperature-sensitive ones.

The fact that the goods entrusted to us are transported along the entire route by our own trucks and our longstanding, trusted hauliers (approx. 120 truck and trailer units in total) equipped with the Transiscs telematic system, allows us to keep track of the carriage constantly. This provides our customers with the highest quality of service.
